

Design and Technology

Design and Technology DT is a practical subject where children plan, design and create products using a variety of resources, both indoors and in the school outdoor environment. Children always have the opportunity to evaluate and improve their work. DT is evident throughout the school during discovery workshops as well as in adult lead focussed learning.

Children across the school cook regularly, learning about and applying the principles of nutrition and where our food comes from. Cooking is often a cross-curricular subject, the year 1 children recently made sandwiches whilst learning about writing instructions and made fruit jellies whilst learning about measurement and capacity in maths
